

# AIRLINE AI SERVICE DESK

## Portfolio: Passenger Communication, Verification & Refinement

BBA Aviation Management | CLO04

Student Name: Ehman Singh Gosal

Roll Number: 2620996509

Programme / Section: BBA Aviation Management

Date: 9/10/2026

AI Tool Used: ChatGPT / Gemini

Fictional classroom simulation — not live airline information.

# Portfolio Overview

This portfolio contains two connected classroom labs. Lab 1 explores six prompting strategies for a fictional flight delay. Lab 2 focuses on source verification, clarification, criteria-based evaluation, prompt chaining, operational updates, multilingual consistency and a reusable prompt template.

## Scenario Reference Sheet

| Field                               | Lab 1 / Original Lab 2 Information                                                   |
|-------------------------------------|--------------------------------------------------------------------------------------|
| Airline / Flight                    | SkyBridge Airlines / SB204                                                           |
| Route                               | Delhi → Mumbai                                                                       |
| Scheduled departure                 | 2:00 PM                                                                              |
| Original expected revised departure | 4:30 PM                                                                              |
| Delay reason                        | Incoming aircraft arrived late                                                       |
| Original next update                | 3:30 PM                                                                              |
| Fictional refreshment policy        | A delay of two hours or more qualifies for a refreshment voucher                     |
| Special assistance                  | Contact the service desk                                                             |
| Not provided                        | Refund eligibility, hotel accommodation, boarding gate, voucher collection procedure |

Important verification: the original delay is 2 hours 30 minutes. In Lab 2, the later operational update changes the expected revised departure to 5:15 PM and the next update to 4:15 PM; the updated delay is 3 hours 15 minutes. An expected time is not a guarantee.

## Evidence and Academic Integrity Note

Insert your own readable screenshots from your AI conversation at each marked evidence point. The example responses and completed checks below are a portfolio draft based on the supplied fictional facts. Review them, personalise the observations in your own words, and do not claim a screenshot was captured if it was not.

# LAB 1 — Creating Passenger Communications Using Prompting Strategies

Programme: BBA Aviation Management | CLO04 | Duration: 75 minutes | Coding required: None

## Round 1 — Zero-Shot Prompting

Exact prompt:

*Write a passenger message about a delayed flight.*

Example output:

*Dear Passenger, we regret to inform you that your flight has been delayed. We apologise for the inconvenience and will share further updates as soon as they are available. Thank you for your patience.*

Observation: The response is general and polite, but it does not identify the flight, route, departure times, reason for delay, assistance option or next update. No unsupported specific claim is present in this example.

Two missing details: (1) flight number and route; (2) expected revised departure and next update time.

What must be added before use: verified flight facts, the applicable refreshment policy, special-assistance guidance and a clear statement that the revised time is expected rather than guaranteed.

## Round 2 — Context and Constraints

Exact prompt:

*Using only the supplied SB204 flight information, write a passenger email with a subject line and a body of no more than 100 words. Include the flight number, route, scheduled departure, expected revised departure, delay reason, refreshment voucher eligibility, special assistance guidance and next update time. Do not invent a boarding gate, voucher collection procedure, refund entitlement or hotel accommodation. Present the revised departure as an expected time, not a guarantee.*

Example output — passenger email:

Subject: Update on SkyBridge Airlines Flight SB204

Dear Passenger,

SkyBridge Airlines flight SB204 from Delhi to Mumbai, scheduled for 2:00 PM, is now expected to depart at 4:30 PM because the incoming aircraft arrived late. Under our stated policy for this classroom scenario, passengers qualify for a refreshment voucher when a delay is two hours or more. For special assistance, please contact the service desk. Our next update will be at 3:30 PM. The revised departure time is an estimate and is not guaranteed.

We apologise for the inconvenience and thank you for your patience.

| Verification check                     | Result  | Correction / note                                      |
|----------------------------------------|---------|--------------------------------------------------------|
| Flight number SB204                    | Correct | Matches supplied facts.                                |
| Route Delhi → Mumbai                   | Correct | Matches supplied facts.                                |
| Scheduled departure 2:00 PM            | Correct | Matches supplied facts.                                |
| Expected departure 4:30 PM             | Correct | Clearly described as expected.                         |
| Reason: incoming aircraft arrived late | Correct | Matches supplied facts.                                |
| Refreshment voucher eligibility        | Correct | 2 h 30 min delay meets the fictional 2-hour threshold. |
| Special assistance                     | Correct | Directs passengers to the service desk.                |
| Next update 3:30 PM                    | Correct | Matches supplied facts.                                |
| No unsupported details or guarantees   | Correct | No gate, refund, hotel or collection                   |

|  |  |                     |
|--|--|---------------------|
|  |  | procedure invented. |
|--|--|---------------------|

Two improvements compared with Round 1: the message uses verified operational details, and it explains available assistance and the next update without inventing benefits.

### Round 3 — Role Prompting

Exact prompt:

*Act as a passenger service executive at SkyBridge Airlines. Rewrite the email from Round 2 in a calm, respectful and helpful tone. Briefly acknowledge the inconvenience. Preserve all supplied facts, keep the body within 100 words and avoid guaranteeing departure or adding new benefits.*

Example output:

Subject: Flight SB204 — Departure Update

Dear Passenger,

We apologise for the inconvenience caused by the delay to flight SB204 from Delhi to Mumbai. The flight, scheduled for 2:00 PM, is now expected to depart at 4:30 PM because the incoming aircraft arrived late. Under the stated classroom policy, passengers qualify for a refreshment voucher for delays of two hours or more. For special assistance, please contact the service desk. We will provide the next update at 3:30 PM. Please note that the revised departure time is an estimate. Thank you for your patience.

Tone observation: The phrase “We apologise for the inconvenience caused” acknowledges the passenger’s experience politely without making an unsupported promise.

### Round 4 — Few-Shot Prompting

Exact prompt includes these examples:

*Example 1 — Passenger: “Why is the flight delayed?” Response: “The incoming aircraft arrived late. We apologise for the inconvenience.”*

*Example 2 — Passenger: “Which boarding gate should I go to?” Response: “The boarding gate has not been provided. Please contact the service desk for confirmation.”*

*Now answer the four passenger questions below using the same Passenger / Response format, within 35 words each, using only supplied SB204 information.*

| Passenger question                               | Response                                                                                                                                                     |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| When is our flight expected to depart?           | Response: Flight SB204 is expected to depart at 4:30 PM. This is an estimated time and is not guaranteed.                                                    |
| Will I receive refreshments?                     | Response: Under the supplied fictional policy, a delay of two hours or more qualifies passengers for a refreshment voucher. The delay is 2 hours 30 minutes. |
| Will the airline provide a hotel?                | Response: Hotel accommodation is not confirmed by the supplied information. Please contact the airline’s authorised service team for clarification.          |
| I need special assistance. Who should I contact? | Response: Please contact the service desk for special assistance.                                                                                            |

How examples influenced the output: the examples establish a consistent Passenger / Response format and demonstrate how to state missing information without guessing.

### Round 5 — Structured-Output Prompting

| Passenger question                     | Answer based on supplied information | Information still needed |
|----------------------------------------|--------------------------------------|--------------------------|
| When is the flight expected to depart? | Expected departure is 4:30 PM.       | None                     |

|                                  |                                                                                      |                                                                                                    |
|----------------------------------|--------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| Why is the flight delayed?       | The incoming aircraft arrived late.                                                  | None                                                                                               |
| Can I get a refreshment voucher? | Yes. The 2 h 30 min delay meets the fictional policy threshold of two hours or more. | Voucher collection procedure is not provided.                                                      |
| What is the boarding gate?       | Not provided.                                                                        | Confirm the gate with authorised airport/airline operations before advising passengers.            |
| Can I get a refund?              | Not provided; eligibility cannot be determined from the scenario.                    | Confirm the applicable refund policy and passenger circumstances with the authorised airline team. |

Why the table helps: it separates confirmed facts from unknowns, helping a service desk executive answer consistently and avoid presenting assumptions as airline policy.

## Round 6 — Audience-Based Prompting

### A. Passenger announcement (under 70 words)

Attention passengers travelling on SkyBridge Airlines flight SB204 from Delhi to Mumbai. The flight is now expected to depart at 4:30 PM because the incoming aircraft arrived late. Passengers qualify for a refreshment voucher under the stated delay policy. For special assistance, please contact the service desk. The next update will be at 3:30 PM. The revised departure time is an estimate.

### B. Internal briefing for airport passenger service staff (under 100 words)

Flight SB204, Delhi–Mumbai, was scheduled for 2:00 PM and is currently expected to depart at 4:30 PM due to the late arrival of the incoming aircraft. The delay is 2 hours 30 minutes, meeting the fictional policy threshold for a refreshment voucher. Direct passengers requiring special assistance to the service desk. The next passenger update is due at 3:30 PM. Gate assignment, refund eligibility, hotel accommodation and voucher collection procedure have not been provided; do not confirm these without authorised information. Treat 4:30 PM as an estimate, not a guarantee.

| Comparison point        | Passenger announcement                         | Staff briefing                                   |
|-------------------------|------------------------------------------------|--------------------------------------------------|
| Intended reader         | Passengers                                     | Airport passenger service staff                  |
| Tone                    | Simple, calm and reassuring                    | Operational, concise and precise                 |
| Level of detail         | Only essential passenger-facing facts          | Includes checks and unconfirmed details          |
| Unconfirmed information | Avoids mentioning unsupported benefits or gate | Explicitly lists unknowns staff must not confirm |

## Lab 1 — Comparison and Reflection

| Round | Strategy                | Main change observed                          | Detail checked or corrected                                  |
|-------|-------------------------|-----------------------------------------------|--------------------------------------------------------------|
| 1     | Zero-shot               | General message without specific facts.       | Identified missing flight and timing details.                |
| 2     | Context and constraints | Added verified facts and explicit boundaries. | Checked times, delay reason, voucher threshold and unknowns. |
| 3     | Role prompting          | More empathetic professional tone.            | Ensured tone change did not change facts.                    |
| 4     | Few-shot                | Consistent response structure from examples.  | Checked each answer stayed within the supplied facts.        |
| 5     | Structured output       | Separated answer from missing information.    | Gate and refund remained “Not provided.”                     |
| 6     | Audience-based          | Same facts tailored to two audiences.         | Staff briefing included operational cautions.                |

1. Most useful prompt: Context and constraints produced the most useful passenger email because it supplied the exact facts and set clear limits on invented details. The role prompt then improved the tone while retaining those boundaries.
2. Manual verification: I checked that 2:00 PM to 4:30 PM is a delay of 2 hours 30 minutes. That meets the supplied fictional two-hour threshold for a refreshment voucher.
3. Why human review is necessary: AI may omit details, change a time or add plausible but unsupported information. A human must compare every operational claim with the source before any real passenger communication is sent.

## **Final Approved Passenger Email — Classroom Simulation**

Subject: Update on SkyBridge Airlines Flight SB204

Dear Passenger,

We apologise for the inconvenience. SkyBridge Airlines flight SB204 from Delhi to Mumbai, scheduled for 2:00 PM, is now expected to depart at 4:30 PM because the incoming aircraft arrived late. Under the supplied fictional policy, passengers qualify for a refreshment voucher for delays of two hours or more. For special assistance, please contact the service desk. Our next update will be at 3:30 PM. The revised departure time is an estimate and is not guaranteed.

Thank you for your patience.

Evidence screenshot to insert: final approved email in your AI conversation.

# LAB 2 — Verifying and Improving AI-Generated Passenger Communications

Programme: BBA Aviation Management | CLO04 | Duration: 90 minutes | Coding required: None

## Round 1 — Source-Grounded Prompting

Using only the supplied SB204 information and fictional policy, answer these questions in a table with four columns: Question, Answer, Supporting Fact, Verification Status. Use “Supported” where the source establishes the answer and “Not provided” where information is missing. Briefly show the delay calculation for refreshment eligibility. Do not use external policies or invent facts.

| Question                                         | Answer                           | Supporting fact                                            | Verification status |
|--------------------------------------------------|----------------------------------|------------------------------------------------------------|---------------------|
| When is the flight expected to depart?           | 4:30 PM                          | Expected revised departure is 4:30 PM.                     | Supported           |
| Why is the flight delayed?                       | Incoming aircraft arrived late.  | Supplied delay reason.                                     | Supported           |
| Do passengers qualify for a refreshment voucher? | Yes, under the fictional policy. | 2:00 PM to 4:30 PM = 2 h 30 min; threshold is 2 h or more. | Supported           |
| What is the boarding gate?                       | Not provided.                    | No gate number appears in the supplied information.        | Not provided        |
| Will the airline provide hotel accommodation?    | Cannot be determined.            | Hotel accommodation is listed as not provided.             | Not provided        |

Evidence-linked example: the voucher answer is supported by both the expected departure timing and the stated policy threshold. The arithmetic should be checked manually.

## Round 2 — Clarification Prompting

A passenger asks: “I want to cancel my journey. Will I receive a full refund?” Using the supplied scenario, identify what is unknown. Draft up to three clarification questions for the passenger or authorised airline team. Label who should answer each question. Then write a temporary passenger response within 45 words. Do not approve or reject the refund.

| Clarification question                                                              | Who should answer?      |
|-------------------------------------------------------------------------------------|-------------------------|
| What refund or cancellation policy applies to this booking and disruption?          | Authorised airline team |
| Does the applicable policy provide a refund for this passenger’s circumstances?     | Authorised airline team |
| Has an authorised decision already been made about this passenger’s refund request? | Authorised airline team |

Temporary passenger response: “I understand you would like to cancel your journey. The information currently available does not confirm whether a full refund applies. Our authorised airline team will need to check the applicable policy before we can give you an accurate answer.”

Why clarification is necessary: refund eligibility is explicitly missing, so approving or denying a refund would go beyond the available evidence.

## Round 3 — Criteria-Based Evaluation of Faulty Announcement

| Quoted wording                  | Issue                 | Supporting fact or missing information | Suggested correction          |
|---------------------------------|-----------------------|----------------------------------------|-------------------------------|
| “will definitely depart at 4:30 | Unjustified guarantee | 4:30 PM is an expected revised         | Say “is currently expected to |

|                                                   |                            |                                                                 |                                                                                           |
|---------------------------------------------------|----------------------------|-----------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| PM"                                               |                            | time, not a guarantee.                                          | depart at 4:30 PM."                                                                       |
| "from Gate 12"                                    | Unsupported claim          | Boarding gate was not provided.                                 | Remove gate number; direct passengers to the service desk for confirmation if needed.     |
| "due to bad weather"                              | Incorrect reason           | The supplied reason is that the incoming aircraft arrived late. | Replace with the supplied reason.                                                         |
| "All passengers will receive hotel accommodation" | Unsupported benefit        | Hotel accommodation information is not provided.                | Remove the claim; state that it is not confirmed if asked.                                |
| "a full refund"                                   | Unsupported benefit        | Refund eligibility is not provided.                             | Do not approve or deny; refer to the authorised airline team.                             |
| "Counter 5"                                       | Unsupported procedure      | Voucher collection procedure is not provided.                   | Do not name a counter unless confirmed by an authorised source.                           |
| "next update ... at 4:00 PM"                      | Incorrect time             | Original next update is 3:30 PM.                                | Use 3:30 PM for the original scenario.                                                    |
| No special assistance guidance                    | Missing detail             | Passengers should contact the service desk.                     | Add service desk guidance.                                                                |
| Refreshment voucher                               | Needs policy-based wording | A delay of 2 h 30 min meets the fictional 2-hour threshold.     | State eligibility under the supplied fictional policy without inventing collection steps. |

Overall evaluation: The faulty announcement contains one incorrect delay reason, an incorrect next-update time, a guaranteed departure claim and several unsupported benefits or procedures. The corrected message must restore the supplied facts and make unknowns explicit.

## Round 4 — Prompt Chaining

### Step A — Check

Verified findings: remove the gate number, bad-weather explanation, hotel promise, full-refund promise and Counter 5 instruction. Replace the 4:00 PM next update with 3:30 PM. Add special-assistance guidance to contact the service desk. Keep the departure time as expected, not guaranteed.

### Step B — Corrected passenger email (under 100 words)

Subject: Update on SkyBridge Airlines Flight SB204

Dear Passenger,

We apologise for the inconvenience. Flight SB204 from Delhi to Mumbai, scheduled for 2:00 PM, is now expected to depart at 4:30 PM because the incoming aircraft arrived late. Under the supplied fictional policy, passengers qualify for a refreshment voucher for delays of two hours or more. For special assistance, please contact the service desk. Our next update will be at 3:30 PM. The revised departure time is an estimate, not a guarantee.

Thank you for your patience.

### Step C — SMS (under 45 words)

SkyBridge SB204 Delhi–Mumbai is expected to depart at 4:30 PM due to the late-arriving incoming aircraft. Passengers qualify for a refreshment voucher under the stated policy. Next update: 3:30 PM. For special assistance, contact the service desk.

Purpose of each stage: checking identifies remaining errors; correcting produces a source-grounded email; adapting compresses the same verified facts for SMS without changing their meaning.

## Round 5 — Scenario Comparison and Operational Update

| Field | Original information | Current information |
|-------|----------------------|---------------------|
|-------|----------------------|---------------------|

|                            |                                 |                                       |
|----------------------------|---------------------------------|---------------------------------------|
| Scheduled departure        | 2:00 PM                         | 2:00 PM                               |
| Expected revised departure | 4:30 PM                         | 5:15 PM                               |
| Next update                | 3:30 PM                         | 4:15 PM                               |
| Delay duration             | 2 h 30 min                      | 3 h 15 min                            |
| Reason                     | Incoming aircraft arrived late  | Incoming aircraft arrived late        |
| Refreshment eligibility    | Eligible under fictional policy | Still eligible under fictional policy |

### Updated SB204 passenger email (under 100 words)

Subject: Updated Departure Information — SkyBridge SB204

Dear Passenger,

We apologise for the inconvenience. SkyBridge Airlines flight SB204 from Delhi to Mumbai, scheduled for 2:00 PM, is now expected to depart at 5:15 PM because the incoming aircraft arrived late. Under the supplied fictional policy, passengers qualify for a refreshment voucher for delays of two hours or more. For special assistance, please contact the service desk. Our next update will be at 4:15 PM. The revised departure time is an estimate, not a guarantee.

Thank you for your patience.

### Updated SB204 SMS (under 45 words)

SkyBridge SB204 Delhi–Mumbai is expected to depart at 5:15 PM due to the late-arriving incoming aircraft. Passengers qualify for a refreshment voucher under the stated policy. Next update: 4:15 PM. For special assistance, contact the service desk.

Changed information: expected revised departure changed from 4:30 PM to 5:15 PM; next update changed from 3:30 PM to 4:15 PM; delay duration increased from 2 h 30 min to 3 h 15 min. Unchanged information: scheduled departure, route, flight number, delay reason, special-assistance guidance and voucher eligibility.

## Round 6 — Multilingual Prompting

Updated English email

Subject: Updated Departure Information — SkyBridge SB204

Dear Passenger,

We apologise for the inconvenience. SkyBridge Airlines flight SB204 from Delhi to Mumbai, scheduled for 2:00 PM, is now expected to depart at 5:15 PM because the incoming aircraft arrived late. Under the supplied fictional policy, passengers qualify for a refreshment voucher for delays of two hours or more. For special assistance, please contact the service desk. Our next update will be at 4:15 PM. The revised departure time is an estimate, not a guarantee.

Thank you for your patience.

Hindi version (simple, respectful Hindi)

Subject: Changes to the departure time of SkyBridge flight SB204

Dear passenger,

we apologize for the inconvenience caused. The scheduled departure time of SkyBridge flight SB204 from Delhi to Mumbai was 2:00 PM. The oncoming flight arrived late, so the flight is now expected to depart at 5:15 PM. According to the hypothetical rule provided, passengers are eligible for a refreshment voucher if they are delayed by two hours or more. Please contact the service desk for special assistance. Further information will be provided at 4:15 PM. Please note that the new departure time is approximate, not guaranteed.

Thank you for your patience.

| Detail       | English correct? | Hindi correct? | Verification note        |
|--------------|------------------|----------------|--------------------------|
| Flight SB204 | Yes              | Yes            | Flight number unchanged. |

|                             |     |     |                                     |
|-----------------------------|-----|-----|-------------------------------------|
| Delhi–Mumbai                | Yes | Yes | Route preserved.                    |
| Scheduled departure 2:00 PM | Yes | Yes | Scheduled time preserved.           |
| Expected departure 5:15 PM  | Yes | Yes | Current expected time used.         |
| Next update 4:15 PM         | Yes | Yes | Current update time used.           |
| Correct delay reason        | Yes | Yes | Incoming aircraft arrived late.     |
| Refreshment eligibility     | Yes | Yes | Clearly tied to fictional policy.   |
| Service desk assistance     | Yes | Yes | Guidance preserved.                 |
| No guaranteed departure     | Yes | Yes | Both state the time is an estimate. |

## Round 7 — Reusable Prompt Template

Reusable template (also saved separately as prompt-template.md):

*You are helping draft passenger communications for a fictional airline scenario.*

*Use only the information supplied below. Do not invent flight facts, benefits, procedures, or policy terms. Treat the expected revised departure as an estimate, never as a guarantee. Calculate the delay duration from the scheduled and expected departure times and assess eligibility only against the supplied refreshment policy. If an essential field is missing or ambiguous, ask for clarification before drafting.*

*AIRLINE: [AIRLINE]*

*FLIGHT NUMBER: [FLIGHT\_NUMBER]*

*ROUTE: [ROUTE]*

*SCHEDULED DEPARTURE: [SCHEDULED\_DEPARTURE]*

*EXPECTED REVISED DEPARTURE: [EXPECTED\_REVISED\_DEPARTURE]*

*DELAY REASON: [DELAY\_REASON]*

*NEXT UPDATE: [NEXT\_UPDATE]*

*REFRESHMENT POLICY: [REFRESHMENT\_POLICY]*

*SPECIAL ASSISTANCE GUIDANCE: [SPECIAL\_ASSISTANCE\_GUIDANCE]*

*UNCONFIRMED INFORMATION: [UNCONFIRMED\_INFORMATION]*

*Task: Write a subject line and a passenger email body of no more than 100 words. Include the flight number, route, scheduled and expected revised departure, reason, next update, refreshment eligibility if it can be determined from the supplied policy, and special-assistance guidance. Do not state unconfirmed information as fact. Do not add refund, hotel, gate, or voucher collection details unless they are supplied and verified. After the draft, list any facts that still require confirmation.*

## Template test — SB310

| Field                      | Test information                                              |
|----------------------------|---------------------------------------------------------------|
| Airline / Flight           | SkyBridge Airlines / SB310                                    |
| Route                      | Bengaluru → Hyderabad                                         |
| Scheduled departure        | 10:00 AM                                                      |
| Expected revised departure | 11:15 AM                                                      |
| Delay reason               | Incoming aircraft arrived late                                |
| Next update                | 10:45 AM                                                      |
| Refreshment policy         | Delays of two hours or more qualify for a refreshment voucher |

|                         |                                                                     |
|-------------------------|---------------------------------------------------------------------|
| Special assistance      | Contact the service desk                                            |
| Unconfirmed information | Refunds, hotel accommodation, gate and voucher collection procedure |

Delay calculation: 10:00 AM to 11:15 AM = 1 hour 15 minutes. This is below the supplied two-hour threshold, so the SB310 test must not say the passenger qualifies for a refreshment voucher.

### Test email for SB310

Subject: Update on SkyBridge Airlines Flight SB310

Dear Passenger,

SkyBridge Airlines flight SB310 from Bengaluru to Hyderabad, scheduled for 10:00 AM, is now expected to depart at 11:15 AM because the incoming aircraft arrived late. The next update will be at 10:45 AM. The delay is 1 hour 15 minutes, which does not meet the supplied two-hour threshold for a refreshment voucher. For special assistance, please contact the service desk. The revised departure time is an estimate, not a guarantee.

Thank you for your patience.

### Lab 2 — Reflection

1. Greatest passenger misunderstanding: A promise of a full refund or hotel accommodation could cause passengers to make financial or travel decisions based on a benefit that has not been confirmed. A guaranteed departure time could also cause passengers to rely on an estimate as if it were certain.
2. “Information not provided” means the available source does not establish the answer. It is not proof that a passenger is ineligible, so the authorised airline team must confirm the applicable policy before a decision is communicated.
3. An outdated departure time could mislead passengers, create confusion at the airport and undermine trust. Messages must be updated consistently whenever verified operational information changes.
4. AI-assisted evaluation still requires human verification because the model can overlook contradictions or produce plausible but unsupported details. Human review compares each claim with the supplied source and checks operational arithmetic and translation consistency.

### Final Communication Pack Checklist

- ☐ Updated English email for SB204 uses 5:15 PM and 4:15 PM.
- ☐ Updated SMS for SB204 uses 5:15 PM and 4:15 PM.
- ☐ Hindi email preserves all facts and describes departure as expected.
- ☐ Reusable prompt template is saved as prompt-template.md.
- ☐ SB310 test uses its own route and timings and does not claim voucher eligibility.
- ☐ All evidence screenshots are inserted and readable.

## README project descriptions

### ### Lab 1 — Airline Passenger Communication: Prompting Strategy Lab

- Business problem: Preparing accurate communication for a fictional flight delay.
- Tools: ChatGPT or Gemini, Microsoft Word, GitHub.
- Strategies: Zero-shot, context and constraints, role prompting, few-shot, structured output and audience-based prompting.
- My contribution: [Describe your comparisons, checks and corrections in your own words.]
- Key finding: Supplying verified context and constraints makes passenger communication more accurate and useful.
- Skills: Prompt engineering, passenger communication, audience adaptation, factual verification and documentation.
- Limitations: Fictional scenario; no connection to live airline systems.

### ### Lab 2 — Airline Passenger Communication: Verification and Refinement Lab

- Business problem: Correcting unsupported claims and updating communication after a fictional flight-delay change.
- Tools: ChatGPT or Gemini, Microsoft Word, GitHub.
- My contribution: [Describe your evaluation, corrections, translation checks and template test.]
- Skills: Source verification, clarification, prompt chaining, quality evaluation, operational updates, multilingual verification and template design.
- Key finding: Current passenger messages must use the latest verified timings, while unknown benefits and procedures must remain unconfirmed.
- Limitations: Fictional scenario; no connection to live airline systems.

## AI-use declaration

AI generated draft responses and assisted with evaluation and translation. I checked the outputs against the supplied fictional information and corrected errors. My observations and reflections are my own work. No message was sent to actual passengers.

## Final Submission Checklist

- ☐ Replace student name, roll number, programme/section, date and AI tool details.
- ☐ Personalise reflection sections so they accurately describe your own learning.
- ☐ Capture and insert screenshots from your actual AI conversations.
- ☐ Save the completed document as DOCX and export a PDF.
- ☐ Upload Lab 1 files to lab-01-passenger-communication.

- ☐ Upload Lab 2 files and prompt-template.md to lab-02-verification-and-refinement.
- ☐ Open the uploaded files to confirm they work and are readable.
